Note. “Senior Managers” are responsible for health and safety within their organisational unit, specified areas or as a consequence of their activities, and for any additional activities as agreed and delegated to them (e.g. where they accept responsibility for day-to-day safety arrangements for staff who have other line managers, for reasons of geographical or other convenience). They may be Deans, Heads of School, Directors of Institutes, Directors and Heads of Service in non-academic areas, the University Librarian, the Directors of the Manchester Museum and the Whitworth Art Gallery, and their equivalents.
**Introduction**

1. The Health and Safety (Display Screen Equipment) Regulations 1992\(^1\) place a duty on the University to analyse workstations, and to assess the health and safety risks to those users. The regulations date from before the use of mobile devices, and relate mainly to a “traditional” workstation at a desk, with screen, keyboard and desktop computer. However, the basic principles and practices laid out in the Regulations are applicable to the use of mobile technology and a wide range of working environments and work patterns. Use of more modern devices and work practices should be included in our risk assessments.

2. A Display Screen Equipment (DSE) user is defined as an employee who “habitually uses display screen equipment as a significant part of his or her normal work”. DSE use has become so commonplace that the presumption should be that an employee is a DSE User unless their work involves very little (less than 1 hour per day) or no use of DSE. This will therefore include large numbers of administrative, academic, technical and support staff.

3. The Regulations cover workstation analysis, requirements for workstations, daily work routine, eyesight, training and provision of information.

4. The University’s operates a system of self-assessment to ensure compliance with the requirement to assess individual workstations, administered locally by appointed Display Screen Assessors (“DSAs”).

**Responsibilities**

5. **Senior Managers** should appoint an appropriate number of DSAs for their area, and ensure that the appointees undertake appropriate training. Detailed arrangements will vary; some schools/directorates may choose to appoint several assessors; others may wish to appoint someone who has the resources to co-ordinate assessments for the whole school/area. In some cases, the School Safety Advisor (SSA) may be able to carry out the role; in others, an administrative officer may be more appropriate. General advice can be obtained from your University Safety Co-ordinator (USC).

6. **Senior Managers** should also ensure that:

   - each DSE User within their area of responsibility is identified, given information on the health risks associated with such work, and is provided initially with the means of carrying out a self-assessment (i.e. signed up for

---

the on-line assessment or issued with a hard copy), and given guidance on how to complete it;

- the self-assessment forms are collated and checked by the line manager with assistance from a DSA, and that steps are taken to address any residual risks found as a result of the assessment;

- completed assessment records are kept, with reference to the University’s records retention schedule²;

- DSE Users are informed about the arrangements for DSE vision screening and eye and eyesight tests prior to employment and at regular intervals thereafter, and know what to do if they experience a problem with their eyesight;

- where the results of the screening indicate a requirement for a specialist eye examination and/or a requirement for corrective lenses specifically for DSE work, reasonable costs are met towards the costs of an eye examination and/or corrective lenses;

- DSE users are informed about the arrangements to report any health issues relating DSE use.

7. Senior managers could receive assurance about how these responsibilities are being discharged on their behalf, via reporting at the local health & safety committee.

8. Where a member of staff raises a matter related to health and safety in the use of DSE, the line manager should:

- take all necessary steps to investigate the circumstances and review the assessment;
- take corrective measures where appropriate; and
- advise the member of staff of the actions taken to resolve the matter.

9. **Display Screen Equipment Assessors** (DSAs) role may vary according to local circumstances but could include:

- undertaking any necessary training required to fulfil the role;
- identifying any DSE Users, and provide each person with guidance and information about setting up their workstations
- providing assistance to ensure that self-assessment forms are collated and checked by the line manager;

---

ensuring that completed assessment records are kept, with reference to the University's records retention schedule3;

where issues are identified in self assessments, develop an action plan and send to line managers and DSE Users.

providing advice and guidance to individuals identifying issues in their self-assessments, using the University’s guidance checklist at the work station site,

assisting Display Screen Equipment users in making their own self-assessments.

10. **Members of staff** should:

- complete their DSE assessment when requested
- follow appropriate guidance in setting up their workstation
- take regular short breaks from working with their display screen equipment
- where a problem arises in the use of DSE, inform their supervisor / line manager
- in the case of an adverse health condition arising from the use of DSE, advise the University’s Occupational Health Service and his or her own general practitioner.

**Workstation analysis**

11. With assistance from line managers (and depending on the exact local arrangements), the DSAs should identify any DSE Users, and provide each person with guidance and information about setting up their workstations, either with the University’s guidance or guidance available from the HSE4.

12. Most DSAs will wish to use the University's on-line self-assessment method as the starting point for staff carrying out their assessments. On-line self-assessments are set and managed up locally by the DSA using the template provided by Safety Services. The self-assessment is designed to be used without special training, as guidance is provided within the questionnaire.

---

3 See [http://documents.manchester.ac.uk/display.aspx?DocID=6514](http://documents.manchester.ac.uk/display.aspx?DocID=6514). For DSE assessments, this is normally until superseded + 5 years.

Requirements for workstations

13. Many of the physical requirements for workstations are covered in the self-assessment questionnaire and relate to issues such as glare, reflections or flicker on the screen, brightness and contrast, space requirements, etc.

14. Managers procuring components of any workstation should always take into account the fundamental requirement to provide equipment that can be adjusted to suit the individual DSE User, rather than making the DSE User adapt uncomfortably to the limits of the equipment. A good example is seating; most office chairs sold now are capable of being adjusted in several ways including seat height, backrest height and tilt.

Eyes and eyesight

15. The Regulations include the requirement for the employer to provide:

- appropriate eye and eyesight tests to DSE Users on request; and
- special corrective appliances (glasses) where the test(s) indicate they are necessary.

16. DSE users are encouraged to attend the University Occupational Health Service for a health assessment if the DSA recommends they do so following analysis of the self-assessment questionnaire; or if they begin to experience discomfort or other visual problems when using DSE.

17. If the health assessment indicates that the employee may have a problem at a distance relevant to DSE use, the DSE User will be referred to an Optometrist for a further assessment and, if required, for the provision of special spectacles specifically for DSE use.

18. The Occupational Health Service will issue the DSE User with a letter for the Optometrist stating that a professional eye test is required and that the University will be responsible for the cost of any spectacles, if required specifically for DSE use. The DSE User's manager will be informed of this referral by the Occupational Health Service. The employee may attend an Optometrist of their choice. Individuals don’t need to attend additional OH health assessments for onward referral to an opticians relating to DSE work.

19. DSE Users should be aware that the cost contribution is intended to cover the sight correction required for DSE use (only); it does not cover the cost of other sight corrections. The cost for the provision of spectacles specifically for

---

5 At 9 May 2019– this contribution was up to £85
DSE distance appears to vary significantly between Optometrists. Bifocal and varifocal spectacles are not normally recommended for DSE work.

**Musculoskeletal disorders**

20. Where a member of staff raises a matter related to their health in the use of DSE, either via the on-line assessment or at any other time, their line manager should:

- investigate the circumstances and review the assessment, involving the DSA as appropriate;
- take corrective measures including referral to Occupational Health or, in possession of supporting medical evidence, the University’s Disability Advisory and Support Service (DASS)
- advise the member of staff of the actions taken to resolve the matter.

**Provision of information to DSE users**

21. Managers of new DSE Users and those setting up new workstations or equipment should ensure that they provide them with information and instruction on how to set up workstations in a manner that will not adversely affect their health.

22. Further guidance is contained in the Safety Services DSE toolkit and Occupational Health webpages. Information leaflets are also available as free downloads from the HSE’s webpages.

**Training for display screen assessors**

23. DSAs should complete the online DSAs course in the University’s training catalogue (TLCO100 Assessing Display Screen Equipment).

24. The requirement for DSA refresher training should be decided on a case by case basis; the decision may be informed by factors such as the DSA’s experience and case load profile (numbers, frequency, and complexity), the extent/pace of change in current thinking and best practice with DSE assessment issues.

25. Approaches to refresher training should be individually tailored and may take the form of: competency discussions at P&DR or with Safety Services personnel; repeating the online course; reviewing current guidance in the Safety Services DSE toolkit; reflecting on personal practice or attending problem solving workshops, or any combination of these approaches.
Monitoring and review

26. DSE assessments should be reviewed if significant changes occur, if the DSE User reports any adverse symptoms or if the original assessment is no longer valid. Significant changes could include:

- a new piece of furniture (desk, table);
- an office rearrangement or relocation;
- provision of a new or replacement computer or new software;
- a change in lighting;
- an injury or health condition experienced by the DSE User; and/or
- a change in work pattern leading to more intense and prolonged DSE use.

27. It is also good practice to review the assessments periodically (e.g. every two years) to pick up less significant or unreported changes.

Assessment of mobile devices, work patterns and environments

28. Although the current Regulations cover mobile and touch screen devices used away from formal workstations, it can be hard to analyse the “workstation” which might be on a train, in a lecture theatre, at home, at a “hot-desk” or other workplace. A formal DSE assessment is only required where these devices are used for long periods.

29. Therefore, by applying the basic DSE assessment principles, raising awareness, making dynamic assessments, and referring to other specific Safety Services guidance (e.g. Homeworking, Generic and Dynamic Risk Assessments,) the risks involved should be addressed.

| **Implementation date:** | v2.0 1 August 2019  
v1.0 1 July 2015 |
| **Version:** | 2.0 April 2019:  
Personnel updated.  
Section regarding online assessment updated to align with changes to arrangements.  
Responsibilities section expanded to include suggested responsibilities for DSE assessors and expanded responsibilities for employees.  
Reference to DSE assessor training change to reflect change to delivery method.  
Occupational Health section updated to align with current arrangements for eyesight tests.  
1.1 April 2016, personnel updated  
1.0 July 2015 |
| **Next review date:** | Upon significant change / 3 years |
| **Owner of this chapter** | Occupational Health, Safety & Training Advisory Group (OHSTAG)  
Chair: Professor Nalin Thakker.  
Secretary: Dr Patrick Seechurn |
