

SOSS GREEN IMPACT – THE LIVING CAMPUS

THE LIVING CAMPUS AND UMAPIT

The UMAPIT citizen science project aims to get our staff, students and visitors engaged with biomonitoring especially in an urban environment, to highlight the wealth of diversity available on University of Manchester campus, and to monitor species distribution across the UK.

UMAPIT WEBSITE AND APP

Visit [UMAPIT](#) to enter information and locations manually via the website using any mobile or desktop device with an internet connection. You can use the app to capture details of species you encounter on campus and beyond, record your finding on a map and send your records directly to the website database. The UMAPIT app is free of charge and is available on android.
