Evaluation of Science and Innovation Policies

MANCHESTER INSTITUTE OF INNOVATION RESEARCH

PROFESSIONAL DEVELOPMENT COURSE

08-12 June 2020
Evaluation of science and innovation policies

Manchester Institute of Innovation Research, as a leading European centre in the study of science, technology and innovation policy and evaluation methodologies, has been offering a residential professional development course on evaluation of science and innovation policies since the 1980s. Based on forty years of evaluation experience, we are able to call upon a wealth of expertise, both from staff with practical experience of the conduct of evaluations, and from policy makers and practitioners.

Need for Evaluation
The demand for evaluation in science and innovation policy continues to grow alongside the demands on STI policy to deliver a broad range of economic and societal goals against financial constraints. Thus, evaluations are increasingly understood as an essential policy learning tool. They help to make policy makers and implementers improve the way they design and operate policies and to better understand their specific contexts. In addition, governments and taxpayers require credible and robust justification that the economic and societal policy objectives are being achieved in an efficient, effective and economic manner. This professional development course addresses the latest thinking in evaluation and teaches the most effective use of evaluation tools.

Who is it for?
• Policymakers, analysts, programme sponsors and managers
• Practitioners in research and research funding organisations
• Professional evaluators and innovation researchers

Key topics
Possible topics include (programme is subject to change):
• Theory and concepts of evaluation designs and frameworks
• Basic evaluation tools and approaches
• Additionality of science and innovation policy
• Indicators, bibliometrics and altmetrics
• Use and usefulness of evaluations
• Evaluation of university research and research organisations
• Evaluation and contribution analysis of social impact of research
• Evaluation of economic impacts
• Evaluation of research organisations
• Peer review and panel evaluations
• Evaluation of new policies, such as challenge driven and demand based innovation policy

Course contents and project work
The course consists of a set of interactive lectures and group project work. During the week, you will design an evaluation with a group of participants, supported by the lecturers. This will enable you to bring together different elements covered in the course and apply them to a real life case. You will return to your job with immediate tangible benefits.

Course outcomes
At the end of the course, you will:
• Understand the key motivations for evaluation and the distinctive features of the evaluation of science, and innovation policies, programmes, institutions and systems,
• Be aware of the main academic literature addressing science and innovation policy evaluation and key examples of evaluations in practice,
• Understand how evaluation has evolved in relation to changing policies for science, technology and innovation,
• Have gained practical insight into the main tools and methods for the design and conduct of evaluations, and therefore
• Be able to commission, interpret and use evaluations across the spectrum of science and innovation policies and
• Be able to design and apply evaluation concepts in the context of a practical situation.
Fee includes

- All course materials,
- Accommodation at the Hyatt Regency (beside the Alliance Manchester Business School).
- Social activities (social dinner and a tour of Manchester)

Full terms and conditions are outlined at our website at https://www.alliancembs.manchester.ac.uk/research/innovation/Study/Professional-Development-Short-courses/Fees-application-details.html

How to apply

Please contact the Institute Manager, Debbie Cox (debbie.cox@manchester.ac.uk) who will be able to send you an application form and further details.

The Manchester Institute of Innovation Research is a world-leading centre of excellence in the study of science, technology and innovation policy and management, within the Alliance Manchester Business School at the University of Manchester. With over 50 members, our research, teaching, professional development and engagement activities build on many years of expertise, covering a broad range of expertise and interests across the landscape of innovation.

The Institute’s programme of research combines four interlinked perspectives: we analyse the creation and exploitation of innovation in firms, the dynamics and governance of emerging technologies, the broader long term transitions of socio-technical systems in relation to societal challenges, and the specific role of the state and public sector in these areas. This approach allows us to better understand how science, technology and innovation can contribute to the world around us.
