New Search Functionality - Top Tips Search Terms

Catalogue and CAS Numbers: Enter these with or without dashes or slashes and all relevant results will be returned, irrespective of where you placed the dash or slash.

Product and Pack Sizes: Within the Science Warehouse catalogue, there may be variations in catalogue data such as '80 gsm A4 paper' (with a space before gsm) versus '80gsm A4 paper' (without the space). Searching without the space is recommended as products both with and without the space will then be matched by the search term.

If you want to further filter on Supplier, search the product and pack size first, and then filter by Supplier to get more accurate results.

Wildcard: Place an asterisk at the end of a search term to use a wildcard search result e.g. pen*.

Please Note: Search will only return results based on the first 10 Search Terms so ensure you keep these brief and relevant. Less is more!

Browse a Supplier's Catalogue

Search a Supplier's entire catalogue by selecting the 'Browse Supplier' option from the Homepage; this is no longer limited to 1,000 items.

Previewing Your Results

Number of Results: The top 10,000 most-relevant results are now displayed and applying filters will apply to the entire results set, even if there are more than 10,000 results from your search.

More options to sort results: The search results will default to relevance and you now have the option to sort, ascending or descending, by:

- Price
- Product Name
- Supplier Name
- Catalogue No.
- Manufacturer Part No.

When you sort by a new option, the entire results set will be re-ordered, allowing you to refine your results better.

New Search Functionality - Top Tips Filtering your Results

Filtering Search Results: Your selected filters are now shown above the search results, as a reminder, and these can be removed by clicking the 'X' by the relevant term. You are now able to filter the entire results set and not only the shown results.
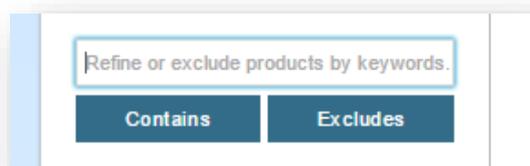

Additional Filters are provided to help you further refine your search – results can now be filtered by:

- Preferred status
- With image
- POA prices can be filtered out (if these are present)
- Refine by keyword and refine by excluding keyword
- By typing max / min price or using the slider bar

Applying Filters: Filters now apply to the entire results set, not just the displayed results. There is an upper limit of 200 options per filter to select from – if you are unable to find what you are looking for, then you will need to further refine your search terms.
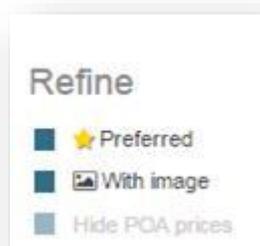

Refine by/or Exclude Keywords

You can now search for a word (or multiple words), select filters and/or exclude keywords to refine the search.

Refine or exclude products by keywords using the search function seen here.

Searching within a filter: Once you have your results, these are sorted by number of matches by default. You now have the ability to search within a specific filter, using the entry field provided.
