The University of Manchester Alliance Manchester Business School

Background

In March 2019, The University of Manchester launched its staff survey, to provide an opportunity for employees to feedback on their experiences in working for the University and to highlight issues they feel should be addressed in the future.

The survey was designed by The University of Manchester (in conjunction with Capita Surveys and Research) as an online survey, with an option to complete the survey on paper or over the telephone.

The survey was distributed on 4th March 2019 with a closure date of 8th April 2019. Capita Surveys and Research processed and validated 7,424 completed survey questionnaires from The University of Manchester employees: this gives a response rate of 69% based on the 10,814 staff invited to participate.

In addition, UMC staff received invitations to participate in the staff survey. UMC achieved 167 responses from 474 members of staff invited, equivalent to a 35% response rate. The results are reported separately from this report.

Response Rate

The Alliance Manchester Business School achieved a response rate of 74% i.e. 358 out of 487 employees responded to the survey.

Presentation of results

This report presents a summary of the results for the Alliance Manchester Business School, referred to as area of work (AoW) throughout this report.

Part A: Areas of Strength and Areas for Improvement

All positive perceptions for the primary questions/statements in the 2019 survey in descending ranked order. All results are colour coded to help to identify areas of strength or opportunities for improvement. A comparison to the 2017 results is included.

Part B: Area of Work Results compared to the University Results

A table of results designed to give an overview of the survey results at University level and by Area of Work. Results for the area of work are colour coded red, amber or green and show a comparison to the University question results.

Part C: Area of Work Results in Frequency Data Format

This format provides figures for the number and percentage of respondents to each individual question, encompassing all response options, for example a count and percentage would be given for each of 'Agree', 'Tend to agree', 'Tend to disagree' and 'Disagree'.

Reliability of results

The accuracy of survey results is related to the size of the responding sample, not the whole organisation from which it is drawn. Very low response rates run the risk of non-response bias, e.g. if only 30% of an organisation participate can you be sure that the views of the 30% who responded are the same as the 70% who didn't respond? As a rule of thumb a sample size of 200 responses or a 50% response rate is considered the minimum for opinion research whatever the organisation size, and will overcome non-response bias. When considering a sub-group of a total survey population 50 responses or a 50% response rate is considered the minimum for results to be reliable.

Confidence intervals and statistical reliability

The respondents to the questionnaire are only a sample of the total University population, so we cannot be 100% certain that the figures obtained are exactly those we would have if everybody had returned their questionnaires, i.e. the 'true values'. We can, however, predict the variation between the sample results and the 'true' values from the knowledge of the size of the samples on which the results are based, the 'confidence level'.

In social research, the most common measure of confidence for this prediction is the 95% confidence interval – where the chances are 95 out of 100 that the true value would be within a specified range – i.e. if everyone had responded. As a general guide it is calculated that the results for the Alliance Manchester Business School are within \pm 1% (the confidence interval), for each question.

Understanding the effect of rounding

Figures throughout this report are displayed as whole numbers for the ease of reading. To ensure the figures are as accurate as possible we apply rounding to the figures to the nearest percentage point. Sometimes this will mean that the figures shown may not be identical if calculations are performed using the figures displayed in the report, however any difference would not be larger than ± 1 percentage point.

Therefore, if you sum the percentages for all the response options to a question the figure may not sum to 100%, but may sum to 99% or 101%.

When combining the total positive responses we first combine the number of responses and then calculate a combined percentage, rather than simply adding the two individual response percentages together.

In the example shown below, if we sum the displayed percentages for *agree* and *tend to agree* to calculate the percentage positive response it would be 91%, however, by using raw figures we calculate the result more accurately to 91.5289% which is rounded up to 92%.

EXAMPLE:

	Agree	Tend to Agree	Tend to Disagree	Disagree	Total	Total Positive responses calculation
	(A)	(B)	(C)	(D)	A+B+C+D	A+B
Number of responses	4289	2464	448	177	7,378	6,753
Percent of responses	58.1323%	33.3966%	6.0721%	2.3990%	100.0000%	91.5289% (this rounds up to 92%)
Rounds to	58%	33%	6%	2%	99%	91%

Note

When calculating the percentage point differences between survey results, the whole numbers for each result, following the rounding of the raw figures, are used.

Part A: Areas of strength and areas identified for improvement

This part of the report displays all the primary questions in the survey in table format for area of work. The table contains the 2019 percentage; the 2017 percentage; and the percentage point change between the two years where a comparison is available. A summary table of the overall number of improvements and deteriorations between the 2019 and 2017 survey results is shown on the top of each page.

The table presents results in ranked in descending order i.e. the most positive responses appear at the top of the list. The question/statement results are colour coded to help to identify areas of strength or opportunities for improvement.

Cells displaying question results are colour coded red, amber or green according to the percentage of respondents giving a positive response:

GREEN indicates 'strength' - agreement from 75% or more of staff

RED

AMBER indicates 'opportunities for improvement' - agreement from between 51% and 74% of staff

indicates 'areas for improvement' - agreement from 50% or fewer staff.

Calculating the 'combined positive' perceptions

The result for each question is calculated by adding together the 'Agree' and 'Tend to Agree' responses and using the resulting combined percentage or using the straightforward 'Yes' responses to questions.

However, to calculate a 'combined positive' result for some questions the 'Disagree' and 'Tend to Disagree' responses are combined to generate the percentage, or the straightforward 'No' response is used.

For example, to find the 'combined positive' result for the question 'Relationships at work are strained' we add together the 'Disagree' and 'Tend to Disagree' responses as these are the respondents who have said 'Relationships at work are <u>not</u> strained'.

A second example, the 'positive' response in relation to the question 'Do you believe you are currently being harassed or bullied at work?' is the 'No' response, i.e. those respondents who have said 'I am not currently being harassed or bullied at work'.

When ranking and comparing results for questions throughout the survey we will always use the 'combined positive' and show the relevant associated question text as shown in the examples above.

Notes

Please note, whilst there may be a high percentage of employees who identify themselves as <u>not</u> being harassed, bullied or discriminated against, and this is identified as a strength in the analysis, these areas should be considered as areas for improvement as most organisations have a zero tolerance policy regarding these issues.

Sub-set questions/statements are only asked of participants meeting certain criteria (usually giving specific response(s) to a previous question) and therefore are answered by a smaller number of participants. To ensure anonymity is maintained, some of the sub-set questions/statements are excluded from this analysis. However, as a large proportion of employees have responded to the sub-set questions in Question Block 6: Performance and Personal Development (Q6-2 to Q6-6), and Q8-10 'Has your stress had an impact on your ability to cope with the work demands placed on you?' these follow up sub-set questions are used in the analysis.

The table below shows the percentage of respondents who gave a positive response to the question.

Responses to negatively phrased questions (highlighted in grey) have been treated in reverse to allow direct comparison with positively worded questions / statements. e.g. Q8-7 Relationships at work are not strained, the percentage stated represents the respondents who said 'Tend to Disagree' and 'Disagree' to the question Q8-7 Relationships at work are strained (i.e. gave the positive response).

There may be variation up to 1% when compared to the Frequency Data report due to rounding.

Q8-9 I never feel stressed at work		6	6	0

Part B: Area of Work Results compared to the University Results

This part of the report, known as RAG (Red, Amber, Green) tables, is designed to give an overview of the survey results at area of work level compared to the University results.

Each question is listed in the order it appears in the survey. The figures given are the 'combined positive' i.e. the percentage of respondents who provided a positive response to the question. A higher result indicates a more positive response and a better outcome.

The 'combined positive' result for most questions are calculated by adding together the 'Agree' and 'Tend to Agree' responses and using the resulting combined percentage or using the straightforward 'Yes' responses to the questions.

However, to calculate a 'combined positive' result for some questions the 'Disagree' and 'Tend to Disagree' responses are combined to generate the percentage, or the straightforward 'No' response is used.

For example, the results for the statement 'Relationships at work are strained' are displayed for those who said 'Disagree' or 'Tend to Disagree' to this statement i.e. the positive perception.

The text has therefore been reworded to 'Relationships at work are <u>not</u> strained' and these questions/statements have been highlighted with in grey in the tables.

Colour coding is used to identify whether a group has more positive or negative views than the University result.

Where a group is at least 10 percentage points worse than the University result, the cell is coloured red.
 Where a group is between 5 and 10 percentage points worse than the University result, the cell is coloured amber.
 Where a group is at least 10 percentage points better than the University result, the cell is coloured green.

At the top of the sheet is a count of the number of questions coded red, amber and green for each group.

The RAG report is designed to aid local action planning by understanding whether a group has particular areas of strength and improvement of their own.

The report includes quantitative data only and not data from qualitative questions (free text questions).

Sub-set questions/statements are only asked of participants meeting certain criteria, usually giving specific response(s) to a previous question, and therefore are answered by a smaller number of participants. To ensure anonymity is maintained, some of the sub-set questions/statements are excluded from this analysis.

However, as a large number of staff have responded to the sub-set questions in Question Block 6: Performance and Personal Development (Q6-2 to Q6-6), and Q8-10 'Has your stress had an impact on your ability to cope with the work demands placed on you?' these follow up sub-set questions are used in the analysis.

The table below shows the 'combined positive' i.e. the percentage of respondents answering 'Agree' and 'Tend to Agree' (or 'Yes') to positively worded questions or 'Disagree' and 'Tend to Disagree' (or 'No') to negatively worded questions, unless otherwise stated in the question text.

Responses to negatively phrased questions (highlighted in grey) have been treated in reverse to allow direct comparison with positively worded questions / statements. e.g. Q8-7 Relationships at work are not strained, the percentage stated represents the respondents who said 'Tend to Disagree' and 'Disagree' to the question Q8-7 Relationships at work are strained (i.e. gave the positive response).

The data is categorised by The University of Manchester 2019, 2017, and the difference between the results, then by Faculty and by area of work. The coloured cells indicate a difference to the overall organisation score.

There may be variation up to 1% when compared to the Frequency Data report due to rounding.

Part C: Area of Work Results in Frequency Data Format

This part of the report provides figures for the number and percentage of respondents to each individual question, encompassing all response options. For example a count and percentage would be given for each of 'Agree', 'Tend to agree', 'Tend to disagree' and 'Disagree'.

Each section displays questions in table format with percentages. It should be noted the sum of the total responses throughout this report may not be exactly equal to 100% due to rounding.

Sub-set questions/statements are only asked of participants meeting certain criteria, usually giving specific response(s) to a previous question, and therefore are answered by a smaller number of participants. To ensure anonymity is maintained, some of the sub-set questions/statements are excluded from this analysis. For the same reason, the background/demographic details of the individuals responding to the survey are also excluded.

However, as a large number of staff have responded to the sub-set questions in Question Block 6: Performance and Personal Development (Q6-2 to Q6-6), and Q8-10 'Has your stress had an impact on your ability to cope with the work demands placed on you?' these follow up sub-set questions are used in the analysis.

Where data is available (i.e. the same question was asked in 2017), staff survey responses for the previous year are provided for comparison. Not all questions in the 2019 Survey were asked in 2017.
