

Audiology Career Pathways

Audiologists work with people who have hearing and balance disorders. If you like interacting with people, are fascinated by cutting-edge technology and want diverse career options, then audiology may be for you.

Our degree gives you practitioner-level training and an accredited qualification which allows you to work within both the NHS and the private sector.

Most of our graduates become clinical audiologists or hearing-aid audiologists, but others have gone on to work with hearing aid manufacturers and dispensing companies, universities, charities and schools. 95% of recent graduates are in work or further study six months after graduation.

Below are some profiles of Audiology graduates from The University of Manchester showing what they have gone on to do with their degree since graduating. To find out more about what it is like to study an Audiology degree at Manchester and hear stories from other students and graduates visit the [Biology, Medicine and Health Student blog](#).
