# **Flash-glucose monitoring in sub-optimally controlled Type 1 diabetes (FLASH-UK)**

We would like to thank you for helping to deliver the FLASH-UK study. The purpose of this study was to assess the benefit of using FreeStyle Libre 2 flash glucose monitoring system, in terms of improving glucose levels as measured by HbA1c. The study also evaluated the acceptability and the impact of the system on daily living with diabetes.

Another important aspect of our study is to understand any discrepancies between expected and observed outcomes and how different healthcare environments influence outcomes.

We would now like to invite you to complete a short anonymised questionnaire about your experience in the delivery of the FLASH-UK study. Information gathered from your experience can help future implementation of this device under routine care in the NHS and understand any differences between expected and observed outcomes.

Completion of the questionnaire is completely voluntary and should take about 15 minutes to complete. There is no payment for completing the questionnaire.

We thank you in advance for your cooperation.
