Audio-Visual System User Guide: Design, Fashion, Business Lab

2nd Floor Engineering Building A

Space overview:

This lab features two projectors with associated screens. Control panels are positioned on the columns at each end of the lab. The projectors can display their own local content or mirror that of the other projector.

Projector Control Panels:

1 Display Power
The display ON and OFF buttons power the relevant projector on or off. The buttons illuminate to show the status of the projector or flash to indicate that it is warming or cooling. The associated electric projection screen will lower when the projector is powered on and retract when powered off.

2 Volume
There is no audio system in this lab so this dial is non-functional.

3 Sources
The source buttons are used to select from the available sources:

HDMI: HDMI input plate next to the control buttons. Connect your device with a HDMI cable and select this source to use.
Solstice: Mersive Solstice wireless collaboration and display system. On selecting this source, the screen will display the connection details and security code needed to do this. For more details on how to use the Solstice system visit: www.solstice.manchester.ac.uk
Link: Selecting this will mirror the other projector.

Reporting faults and getting support:

Should you experience a fault with this system, please report to the Media Services Helpdesk via internal extension 52521 or by contacting mediaservices@manchester.ac.uk
