

PSI – Biology Sandpits

Breaking Barriers in Biology

Royce Institute Hub

Learn about world-leading facilities in the PSI Address research challenges in biology

The Photon Science Institute (PSI) invites you to explore research collaboration opportunities between PSI and biomedical researchers.

The PSI currently houses several world-leading spectroscopic characterisation facilities which have the potential to answer complex research questions in biology by providing new methodologies for imaging, chemical mapping and spectroscopy and have biomedical applications.

To forge new links between the PSI and biological researchers, we are hosting 3 sandpit day events on the following themes (10am - 4pm):

- **Biomedical engineering and clinical solutions (28th Feb)**
- **Spectroscopy and imaging in biological systems (2nd March)**
- **Probing dynamics and quantum effects in biology (9th March)**

A total of **£15k seed-funding** is available and will be awarded to the top-ranked proposals + free lunch!
