AUDIOLOGY AND DEAF EDUCATION

At Manchester

If you're considering undertaking a postgraduate course, either on-campus or through online and blended learning, you'll find the perfect environment at The University of Manchester.

Manchester's postgraduate courses draw upon our world-leading research and our strong links to global industry.

Whether you're looking to boost your employability with a master's or embark on a career in research, you'll quickly develop skills and gain exposure to experiences that will set you apart in the job market.

WHY MANCHESTER?

Flexible learning

Advanced audiology students are given the flexibility to tailor their course by selecting units from audiology, deaf education, nursing, and healthcare leadership in Alliance Manchester Business School based on their needs and interests. Our Deaf Education courses also offer multiple modes of study.

1st

The University of Manchester is 1st in the UK and 2nd globally for social and environmental impact.

THE University Impact Rankings 2024

Top city

Manchester is ranked among the best UK cities to live in.

2nd in The Economist's Global Liveability Index, 2024

Learn from award winners

The trailblazing Manchester Centre for Audiology and Deafness (ManCAD) team have been voted team of the year, and its members include Institute of Teaching and Learning teaching excellence winners and paediatric audiologist of the year.

British Academy of Audiology Team of the Year 2020

100+

We've been driving innovation in audiology and deaf education for over 100 years. Deaf Education started at the University, and we were also the first in the UK to have a postgraduate qualification in Audiology.

2nd

We are the second most targeted university by the UK's top 100 recruiters.

The Graduate Market 2024

25 Nobel Prize winners

Join a community of global innovators and pioneers whose achievements have helped shape the modern world – a university where 25 Nobel Prize winners have worked or studied.

Our researchers contribute to society and improve healthcare and education through innovative discoveries and new knowledge.

By choosing Manchester, you will join a university at the forefront of research discoveries, but what does that mean for you?

- > You'll study in an academic environment that helps brilliant thinkers turn inspiration into reality, encouraging enterprise, experimentation, and creative thinking.
- > Courses are informed by the latest breakthroughs.
- > Learn from world-leading minds with close links to industry and a commitment to making a difference.

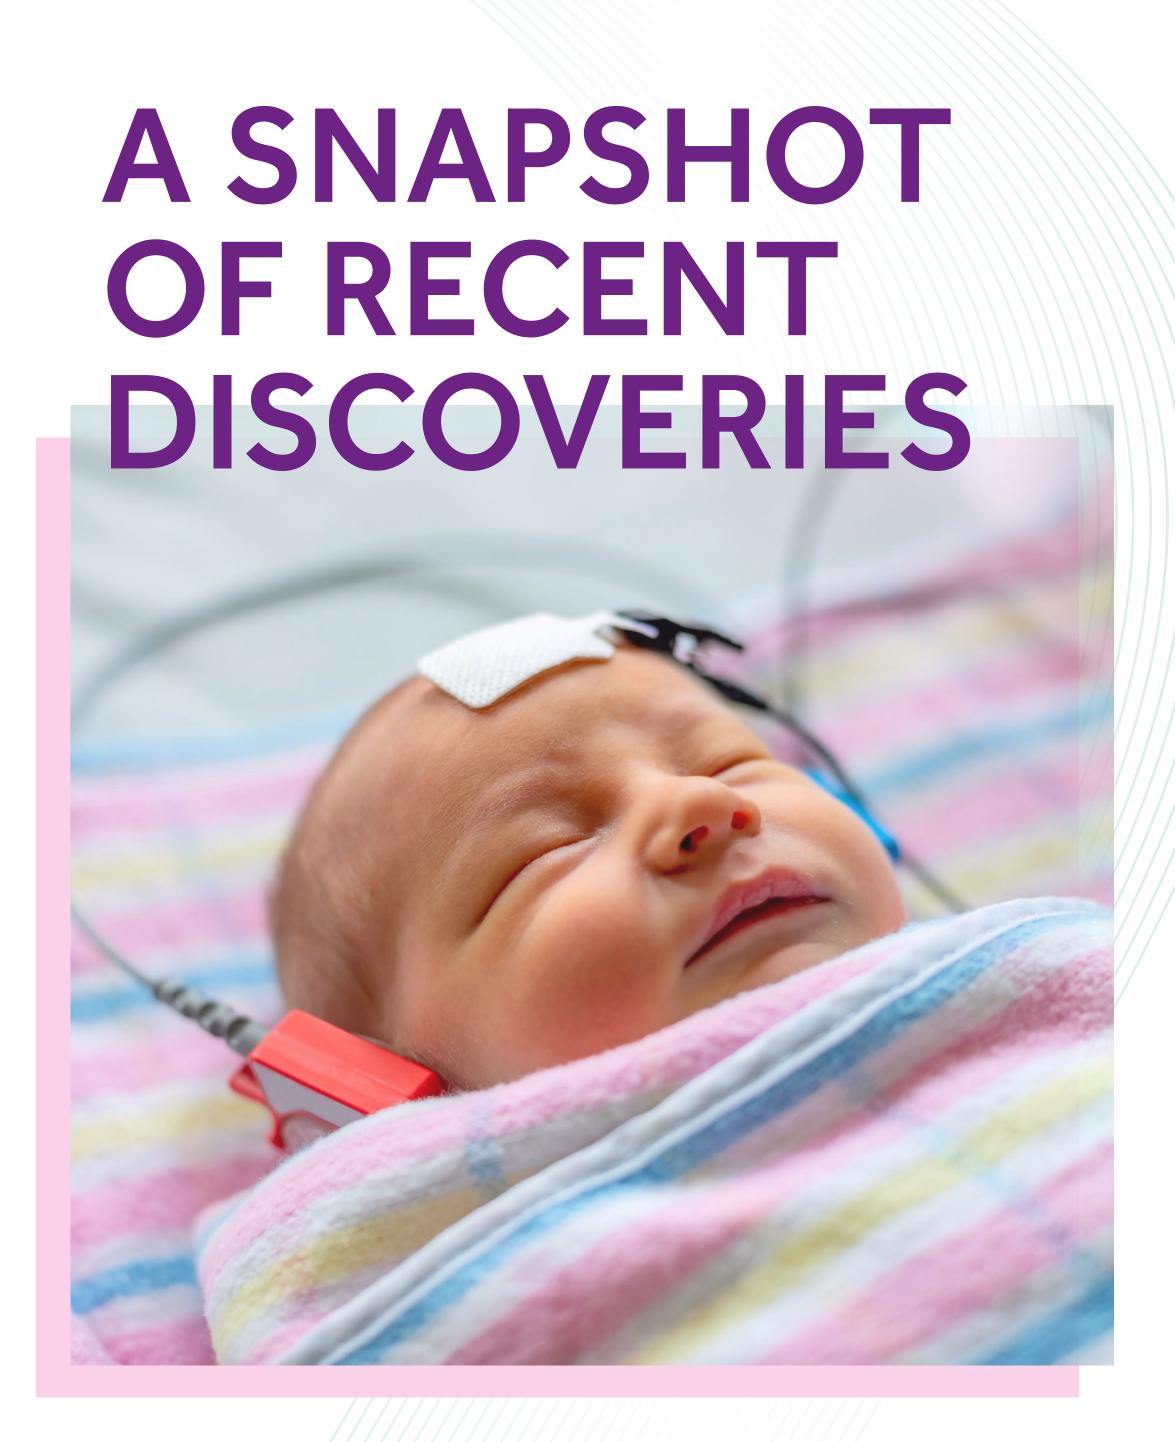

AUDIOLOGY AND DEAF EDUCATION RESEARCH

The Manchester Centre for Audiology and Deafness (ManCAD) at The University of Manchester is a world leader in research and teaching. The Centre underpins and delivers improved services in healthcare and education for adults and children with hearing loss, or who are deaf. As a student at Manchester, you could be part of these discoveries.

We receive funding from UK research councils, industrial partners and charities. The Hearing Health research theme within the £60 million NIHR Manchester Biomedical Research Centre has been a catalyst for many national and international initiatives that are transforming hearing healthcare.

We also have strong links with industry through our Hearing Device Research Centre, which is the only centre of its kind in the UK.

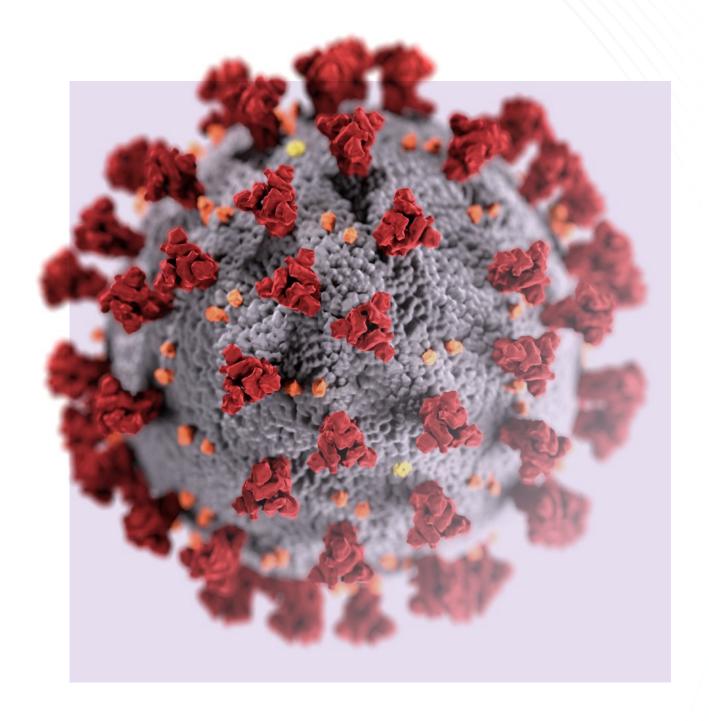

LISTEN TO THE MANCAD PODCAST

GENETIC TEST TO PREVENT BABIES GOING DEAF

A world-first genetic test partly developed by University of Manchester scientists could save the hearing of hundreds of babies in England each year.

Taking just 25 minutes, the test is carried out using a bedside machine that identifies whether a critically ill baby admitted to intensive care has a gene that could result in permanent hearing loss if they are treated with a common emergency antibiotic. It is expected that the test could save the NHS £5 million every year by reducing the need for other interventions, such as cochlear implants, not to mention the immeasurable benefits to the babies themselves.

COVID ASSOCIATED WITH HEARING LOSS, TINNITUS AND VERTIGO

Some viruses, such as measles, mumps and meningitis, can cause hearing difficulties, but what about SARS-CoV-2, the virus that causes COVID-19?

ManCAD researchers identified about 60 studies that report audiovestibular problems in people with confirmed COVID-19. Analysis of the pooled data revealed that 7%-15% of adults diagnosed with COVID-19 report audio-vestibular symptoms. The most common symptom is tinnitus (ringing in the ears) followed by hearing difficulties and vertigo.

HEARING LOSS: HEADPHONES AND CONCERTS COULD PUT YOUNG PEOPLE AT RISK

The World Health Organisation have estimated over 1 billion people worldwide aged 12-34 years could be at risk of noise-induced hearing loss.

Researchers at ManCAD have found that frequently engaging in unsafe listening practices can lead to permanent hearing loss. Fortunately, there are many easy things you can do to lower this risk including turning down the volume on personal listening devices, limiting exposure at loud events by moving away from speakers, taking breaks in quiet spaces and using hearing protection.

100 YEARS OF BREAKTHROUGHS

The Manchester Centre for Audiology and Deafness (ManCAD) is built on a proud 100-year history of pioneering work.

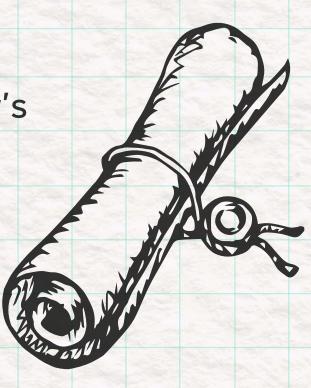

The first
university
department for
deaf education
was secured for
the north by
James Jones.

1920

First students graduate
with a University Teacher's
Diploma and University
Certificate for the
Teachers of the Deaf.

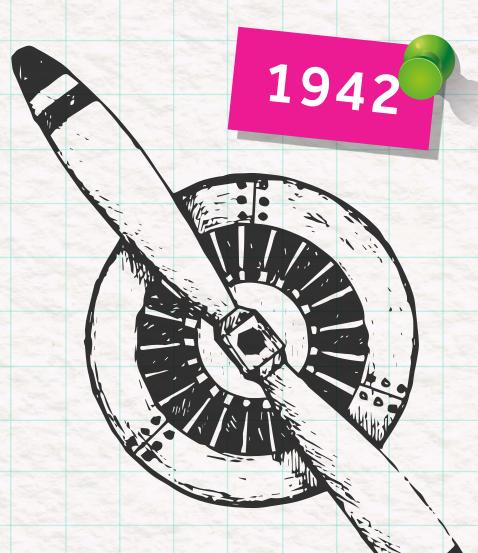

1928 - 1930

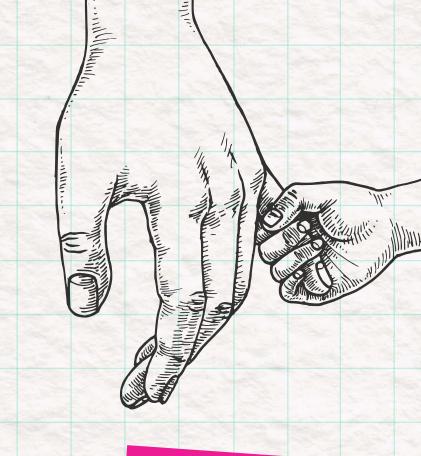

Alexander and Irene Ewing focus on developing research in the department.

Thomas Littler creates
his first group
hearing aid model,
which by the mid1930s was being used
in nine schools for
deaf children.

1933

During the second
world war, Ewing and
Littler work for the Royal
Air Force advising on
suitable earplugs and
helmet design.

1944

Research began to develop the famous
Distraction Test, a behaviour-based
hearing test for early childhood screening
for seven to nine-month-old children.

George Dalziel's early work leads to a 'man in a van' service where an audiological technician would visit schools to check and repair group aids and other assistance equipment, and give advice on its use. The success of this service contributed to the establishment of Local Education Authority peripatetic services across the country.

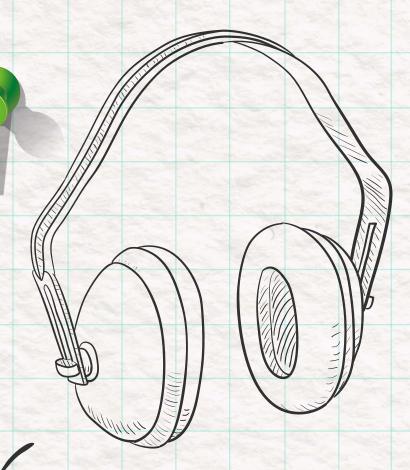

LATE 1950s -EARLY 1970s

Tom Watson builds on the Ewings' work and develops novel hearing tests for young children including the Manchester Junior Word Test and the Manchester Picture Test. The department hosts an International Congress on the Educational Treatment of Deafness.

Around 1,000 attendees came from 41 countries. It is a landmark conference and confirms the Manchester department as an international leader in deaf education and audiology.

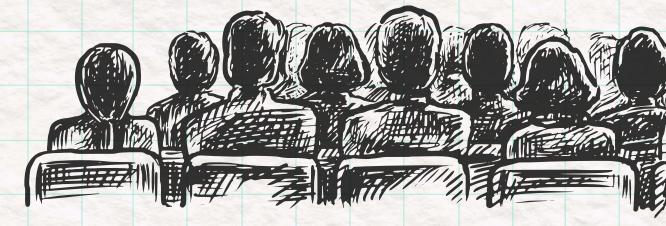

1969

Littler's work on auditory fatigue and occupational hearing loss contributes to a growing appreciation of occupational deafness, which is formally recognised as an industrial hazard in this year.

International Congress on Deaf Education

Manchester is the first university in the UK to have a postgraduate qualification in Audiology, and this becomes an MSc award in 1975.

1985

1988

The department begins to host the Manchester Cochlear Implant Centre, the largest auditory implant centre in the UK.

Manchester becomes
the first and only
organisation to host
the International
Congress on Deaf
Education twice.

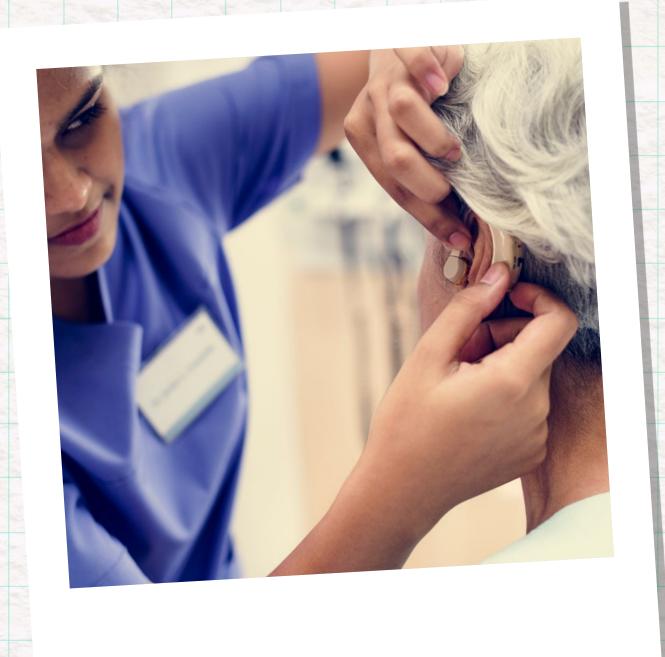

Manchester is involved in the Modernising Hearing Aid Services project in the UK, under which the NHS will provide digital hearing aids. Research collaborations with the NHS and the Central Manchester
University Hospitals NHS Foundation
Trust (CMFT) are re-established.
Projects include investigating the prescription of hearing aids for babies, the challenges of fitting these aids, and checking they're working properly.

2005

ManCAD was instrumental in developing the newborn hearing screening test, which was extended across the UK.

2016

The University of Manchester (jointly with Manchester area NHS Foundation trusts and health science institutions) is awarded National Institute for Health Research (NIHR) funding for a Biomedical Research Centre (BRC) in Hearing Health.

2020s

ManCAD uses UK Biobank data to identify risk factors for hearing disability and look for connections between quality of life, social connectedness, mental health and hearing.

The Manchester NIHR BRC in Hearing Health is renewed.

ManCAD researchers aim to use their interdisciplinary strengths to tackle the challenges of hearing loss across the social spectrum, accelerate national initiatives and provide a clear pathway from research discoveries to benefit for people with hearing loss.

WHAT IS IT LIKE STUDYING A POSTGRAD COURSE AT MANCHESTER?

LIN WU
The first Chinese student
to take the MSc Audiology
course at Manchester

"The University of Manchester allows many cultures and ideas to coexist. Here you can meet different people, experience different cultures and hear different ideas, which is very rare. At Manchester, as long as you keep your curiosity for knowledge and are motivated to fulfil your dreams, the teaching team will do their best to help you."

"The lecturers on the course delivered engaging sessions that opened my eyes to the joys and challenges of deaf education. They were extremely knowledgeable and dedicated to supporting us to become the best qualified Teachers of the Deaf that we could be — to head out into the field and become agents of change."

EMILY DAVIES
A Teacher of the Deaf
(ToD) who studied on the
MSc Deaf Education

BEN GILLETT
An audiologist who studied on the MSc Advanced
Audiology Studies
(Paediatric Pathway) course

"I am studying as many paediatric elements within the course structure as possible to inform and ensure my practice, both at present and going forwards is effective and appropriate. I also want to disseminate this learning to the rest of the department, for their practice."

FACILITIES AND RESOURCES

Audiology and Deaf Education students at Manchester have access to specialist audiology equipment used for hearing and balance testing.

THESE INCLUDE:

- > 11 soundproof booths
- > Audiometry
- > Tympanometry
- > Video otoscopy
- > Otacoustic emissions
- Hearing aid testing

- Hearing aid fitting
- Evoked potentials
- Calorics
- Videonystagmography
- Video head impulse testing
- Vestibular evoked myogenic potentials
- Access to new hearing and radio aids

A WORLD OF OPPORTUNITIES

As a Manchester graduate, your skills will set you apart and prepare you for an exciting future in audiology and deaf education. Here's just a small taste of what our alumni have progressed into:

- > Clinical Technical Support for hearing device company
- > Clinical Lead for Paediatric Audiology
- > Teacher of the Deaf
- Heads of Services for Deaf Children UK-wide
- Co-chair of the National Sensory
 Impairment Partnership
 Reference Group
- Chair of the Sensory Teachers
 Apprenticeship Trailblazer
- > Audiologist

- > PhD/researcher
- Senior Specialist PaediatricAudiologist
- > Research Audiologist
- > Volunteer at the Special Olympics, screening athletes' hearing
- > Clinical Research Audiologist
- > Clinical Scientist in Audiology
- > Inclusion Teacher
- > Deputy Headteacher

AWAJIMIJANA
ALLISON OTANA
Senior Specialist
Paediatric Audiologist in
the NHS in London (2019)

"Manchester
Audiology graduates are
well respected in the private
audiology firms and NHS
audiology departments. This
became apparent to me when
I had lots of interviews before
even concluding my clinical
year. I was able to choose
the department I wished
to work in."

"During my
degree, I had a more
in-depth introduction
to research, and a
highlight for me was
having an article
published based on my
master's thesis."

ELS WALRAVEN
Clinical Research Audiologist at
Widex, a part of WS Audiology,
in Lynge, Denmark (2019)

RORY MCDONNELL
Team Leader for the Royal

Greenwich Sensory Service,
co-chair of the NATSIP
Reference Group, and Chair
of the Sensory Teachers
Apprenticeship Trailblazer

"The Teacher
of the Deaf course
opened me up to a whole
new world. I had no idea about
audiology or about the way
a child develops language
at the beginning. The study
of language development
fascinated me, and
still does."

COURSES

AUDIOLOGY (MSC)

This flexible course allows you to tailor your learning to the area of audiology that most interests you and your career choice.

Develop your knowledge of the anatomy, physiology, pathology and assessment of hearing and balance mechanisms.

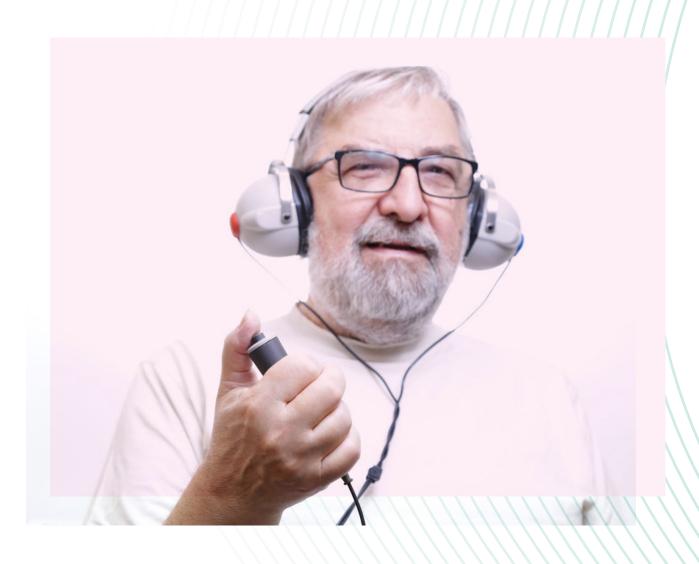

Choose from one of three pathways: Audiology (general), Audiology (advanced), Audiology (paediatrics).

DEAF EDUCATION (MSC/PGDIP)

Become a Qualified Teacher of the Deaf on an internationally recognised course at the most established provider in the UK. For teachers who want to train as a Teacher of the Deaf.

DEAF EDUCATION (PGCERT) (INTERNATIONAL PATHWAY)

Broaden your knowledge of how deaf children learn through this distance learning programme suitable for teachers and practitioners and for teaching or support workers based outside of the UK.

PHD WITH INTEGRATED MASTER'S

If you're planning to undertake a PhD after this master's, our Integrated PhD programme will enable you to combine this postgraduate taught course with a related PhD project.

CONTINUING PROFESSIONAL DEVELOPMENT

CPD course units and workshops draw on the expertise of some of the UK's most respected academics, clinicians and health professionals.

HIGHER SPECIALIST SCIENTIST TRAINING PROGRAMME

This HSSTP is a bespoke five-year workplace-based training programme supported by a Doctoral-level academic award.

SCIENTIST TRAINING PROGRAMME

The STP is a three-year programme of work-based learning supported by an accredited master's degree.
