Accepting Anxiety

We all hate being anxious. It's a horrible feeling. It feels overwhelmingly disturbing, and understandably, we try to keep it at bay by avoiding anything that might make us anxious, or by doing things that help us feel safer in those situations where we feel anxious.

If you're not willing to have it, you will.

Look at this sentence. What does it mean? "If I'm not willing to be anxious, I will be anxious?"

What does that mean? Our mind might say:

"Hmmm. So if I'm not willing to be anxious, I will be anxious. I hate being anxious, so I guess I could give it a try. I'll try to be more willing to feel my anxiety so I won't be anxious"

Okay. But if you decide you could be willing to be anxious, in order to get rid of the anxiety, then you're not really willing to be anxious, and that will result in feeling more anxious!

This is not mumbo jumbo!

Read it again!

It sounds weird, not right. Yet it seems that it's true. If you are only willing to feel anxiety because you hope that by being willing to feel it, it will reduce your anxiety, then it cannot work. That is not the same as being willing to feel your anxiety.

Anxiety is normal. We all feel it. We will all continue to feel it at times.

To help start practising willingness to accept anxiety:

- Notice when you start to feel the normal body response to unhelpful thoughts
- Don't struggle or fight with the feelings and thoughts, just let them be
- It will pass

JUST NOTICE - This is just a normal body response to unhelpful thoughts. It will pass........
Simple or repetitive distracting activities can be especially helpful.

- Ask the person to tap out a rhythm.
- Ask the person to think of 10 different animals.
- Ask the person to think of 10 (blue) things.
- Ask the person to say the alphabet slowly.
- Ask the person to say the alphabet backwards.
- Ask the person to count backwards to 1000 multiples of 7.
- Ask the person to count to 100.
- Ask the person to count backwards in 3s.
- Ask the person to make a shopping list.
- Ask the person to count things that you can see that begin with a particular letter.
2. MINDFULNESS OF THE EXTERNAL WORLD

Background: We carry with us our 5 senses - touch, taste, smell, hearing and sight - but we often register those sensations unconsciously. Using these tools, we can become aware, accepting and mindful of the external world. We can only see, smell, touch, taste and hear in the present.

5,4,3,2,1 Exercises

These are exercises in noticing what is around us:

1. Sight: Look around you and name as you look at 5 different objects (variation: 5 blue/black/green objects), then do the same for 4 of those 5 objects, 3 of those 5 objects, etc.

2. Sight & Touch: Look at, name and touch 5 different objects, noticing their texture, temperature, mass and weight as you do so. Then do the same for 4 of those objects, 3 of those objects, etc.

3. Sight, Touch and Smell/Taste: Look at (in a garden or a kitchen), name, taste and smell 5 different objects, noticing their colours, texture, taste and aroma. Then do the same for 4 of those objects, 3, 2, 1.

4. Hearing: Close your eyes and listen for 5 different sounds. Then 4, 3, 2, 1.

Other Exercises on the External World

1. Mindfulness on washing the dishes
2. Mindfulness on walking
3. Mindfulness on sitting in the garden
4. Mindfulness on driving a car through traffic

Notice physical sensations through the body - sights, smells, sounds, tastes, touch/sensations.
Everyone knows that breathing is an essential part of life, but did you know that breathing plays an essential role in anxiety? This information sheet will briefly discuss the role of breathing in anxiety and guide you through a simple calming technique that uses breathing patterns to help you relax.

Breathing is a powerful determinant of physical state. When our breathing rate becomes elevated, a number of physiological changes begin to occur. Perhaps you’ve noticed this yourself when you’ve had a fright: you might suddenly gasp, feel a little breathless and a little light-headed, as well as feeling some tingling sensations around your body. Believe it or not, the way we breathe is a major factor in producing these and other sensations that are noticeable when we are anxious.

**Anxious breathing**

You might already know that we breathe in oxygen – which is used by the body – and we breathe out carbon dioxide. In order for the body to run efficiently, there needs to be a balance between oxygen and carbon dioxide, and this balance is maintained through how fast and how deeply we breathe. Of course, the body needs different amounts of oxygen depending on our level of activity. When we exercise, there is an increase in both oxygen and carbon dioxide; in relaxation there is a decrease in both oxygen and carbon dioxide. In both cases the balance is maintained.

When we are anxious though, this balance is disrupted. Essentially, we take in more oxygen than the body needs – in other words we over-breathe, or hyperventilate. When this imbalance is detected, the body responds with a number of chemical changes that produce symptoms such as dizziness, light-headedness, confusion, breathlessness, blurred vision, increased heart rate to pump more blood around, numbness and tingling in the extremities, cold clammy hands and muscle stiffness.

The normal rate of breathing is 10-12 breaths per minute – what’s your breathing rate?

**The Calming Technique**

While over-breathing and hyperventilation are not specifically dangerous (it’s even used in medical testing!), continued over-breathing can leave you feeling exhausted or “on edge” so that you’re more likely to respond to stressful situations with intense anxiety and panic.

Gaining control over your breathing involves both slowing your rate of breathing and changing your breathing style. Use the calming technique by following these steps and you’ll be on your way to developing a better breathing habit.

1. Ensure that you are sitting on a comfortable chair or laying on a bed
2. Take a breath in for 4 seconds (through the nose if possible)
3. Hold the breath for 2 seconds
4. Release the breath taking 6 seconds (through the nose if possible), then pause slightly before breathing in again.
5. Practise, practise, practise!

**Breathing tips**

- When you first begin changing your breathing, it may be difficult to slow your breathing down to this rate. You may wish to try using a 3-in, 1-hold, 4-out breathing rate to start off with.

- When you are doing your breathing exercises, make sure that you are using a stomach breathing style rather than a chest breathing style. You can check this by placing one hand on your stomach and one hand on your chest. The hand on your stomach should rise when you breathe in.

- Try to practise at least once or twice a day at a time when you can relax, relatively free from distraction. This will help to develop a more relaxed breathing habit. The key to progress really is practise, so try to set aside some time each day.

By using the calming technique, you can slow your breathing down and reduce your general level anxiety. With enough practice, it can even help to reduce your anxiety when you are in an anxious situation.
Progressive Muscle Relaxation

One of the body’s reactions to fear and anxiety is muscle tension. This can result in feeling “tense”, or can lead to muscle aches and pains, as well as leaving some people feeling exhausted. Think about how you respond to anxiety. Do you “tense up” when you’re feeling anxious? Muscle relaxation can be particularly helpful in cases where anxiety is especially associated to muscle tension. This information sheet will guide you through a common form of relaxation designed to reduce muscle tension.

Muscle tension

Muscle tension is commonly associated with stress, anxiety and fear as part of a process that helps our bodies prepare for potentially dangerous situations. Even though some of those situations may not actually be dangerous, our bodies respond in the same way. Sometimes we don’t even notice how our muscles become tense, but perhaps you clench your teeth slightly so your jaw feels tight, or maybe your shoulders become. Muscle tension can also be associated with backaches and tension headaches.

Progressive Muscle Relaxation

One method of reducing muscle tension that people have found helpful is through a technique called Progressive Muscle Relaxation (PMR). In progressive muscle relaxation exercises, you tense up particular muscles and then relax them, and then you practise this technique consistently.

preparing for relaxation

When you are beginning to practice progressive muscle relaxation exercises keep in mind the following points.

• Physical injuries. If you have any injuries, or a history of physical problems that may cause muscle pain, always consult your doctor before you start.

• Select your surroundings. Minimise the distraction to your five senses. Such as turning off the TV and radio, and using soft lighting.

• Make yourself comfortable. Use a chair that comfortably seats your body, including your head. Wear loose clothing and take off your shoes.

• Internal mechanics. Avoid practicing after big, heavy meals, and do not practice after consuming any intoxicants, such as alcohol.

general procedure

1. Once you’ve set aside the time and place for relaxation, slow down your breathing and give yourself permission to relax.

2. When you are ready to begin, tense the muscle group described. Make sure you can feel the tension, but not so much that you feel a great deal of pain. Keep the muscle tensed for approximately 5 seconds.

3. Relax the muscles and keep it relaxed for approximately 10 seconds. It may be helpful to say something like “Relax” as you relax the muscle.

4. When you have finished the relaxation procedure, remain seated for a few moments allowing yourself to become alert.

Relaxation sequence

1. Right hand and forearm. Make a fist with your right hand.
2. Right upper arm. Bring your right forearm up to your shoulder to “make a muscle”.
3. Left hand and forearm.
4. Left upper arm.
5. Forehead. Raise your eyebrows as high as they will go, as though you were surprised by something.
6. Eyes and cheeks. Squeeze your eyes tight shut.
7. Mouth and jaw. Open your mouth as wide as you can, as you might when you’re yawning.
8. Neck. !!! Be careful as you tense these muscles. Face forward then pull your head back slowly, as though you are looking up to the ceiling.
9. Shoulders. Tense the muscles in your shoulders as you bring your shoulders up towards your ears.
10. Shoulder blades/Back. Push your shoulder blades back, trying to almost touch them together, so that your chest is pushed forward.
11. Chest and stomach. Breathe in deeply, filling up your lungs and chest with air.
12. Hips and buttocks. Squeeze your buttock muscles
13. Right upper leg. Tighten your right thigh.
14. Right lower leg. !!! Do this slowly and carefully to avoid cramps. Pull your toes towards you to stretch the calf muscle.
16. Left upper leg. Repeat as for right upper leg.
17. Left lower leg. Repeat as for right lower leg.
18. Left foot. Repeat as for right foot.

Practice means progress. Only through practice can you become more aware of your muscles, how they respond with tension, and how you can relax them. Training your body to respond differently to stress is like any training – practising consistently is the key.

Centres for Clinical Intervention

- Psychotherapy - Research - Training
Quick Relaxation Techniques

Different relaxation techniques appeal to different people. Please try out each technique and rate it out of 10, then choose the one(s) that suit you best.

**Whole body tension**
- Tense everything in your whole body, stay with that tension.
- Hold it as long as you can without feeling pain.
- Slowly release the tension and very gradually feel it leave your body. Repeat three times.

**Imagine air as a cloud**
- Open your imagination and focus on your breathing.
- As your breathing becomes calm and regular, imagine that the air comes to you as a cloud.
- It fills you and goes out.
- You may imagine the cloud to be a particular colour.

**Pick a spot**
- With your head level and body relaxed, pick a spot to focus on (eyes open at this point).
- When ready, count 5 breaths backward, with each breath allow your eyes to close gradually.
- Concentrate on each breath.
- When you get to 1, your eyes will be closed. Focus on the feelings of relaxation.

**Counting ten breaths back**
- Allow yourself to feel passive and indifferent, counting each breath slowly from 10 to 1.
- With each count, allow yourself to feel heavier and more relaxed.
- With each exhale, allow the tension to leave your body.

**Transformations: pick one that works or make up your own**
- When you think of images like...
- Imagine...
  - Tightly twisted ropes
  - Feel of cold, harsh wind
  - Hard, cold wax
  - Tense, red muscles
- The twisted ropes untwisting
- The cold wind becoming warm and soft
- The wax softens and melts
- The red muscles soften or lighten to pink

**Affirmations: pick one that works or make up your own**
- Breathe deeply and slowly....
- Let the tension flow away....
- I am calm and relaxed, ready for anything...
- This discomfort will pass.....let it go
- I have the power to handle this.
- Relax the jaw, lower the shoulders.
Positive Self-talk / Coping Thoughts Worksheet

Positive statements encourage us and help us cope through distressing times. We can say these encouraging words to ourselves, and be our own personal coach. We have all survived some very distressing times, and we can use those experiences to encourage us through current difficulties. Examples of coping thoughts might be:

- Stop, and breathe, I can do this
- This will pass
- I can be anxious/angry/sad and still deal with this
- I have done this before, and I can do it again
- This feels bad, it's a normal body reaction - it will pass
- This feels bad, and feelings are very often wrong
- These are just feelings, they will go away
- This won't last forever
- Short term pain for long term gain
- I can feel bad and still choose to take a new and healthy direction
- I don't need to rush, I can take things slowly
- I have survived before, I will survive now
- I feel this way because of my past experiences, but I am safe right now
- It's okay to feel this way, it's a normal reaction
- Right now, I am not in danger. Right now, I'm safe
- My mind is not always my friend
- Thoughts are just thoughts – they're not necessarily true or factual
- This is difficult and uncomfortable, but it's only temporary
- I can use my coping skills and get through this
- I can learn from this and it will be easier next time
- Keep calm and carry on

Write down a coping thought or positive statement for each difficult or distressing situation - something you can tell yourself that will help you get through. Write them down on a piece of card and carry it in your pocket or handbag to help remind you.

Preparation

It's not going to be as bad as I think.

It won't last long and I can cope with it.

I am getting better and need to go to rebuild my confidence.

If I do get bad feelings, I know they won't last long and I can cope with them.

It's better to go than not to go. Worry doesn't help.

I might enjoy it if I go.

Coping

Concentrate on what is going on.

I can tolerate anxiety; I've managed it many times before.

Remember to relax and think positive.

This is just anxiety; it is an unpleasant feeling but I've never been ill.

Concentrate on what I have to do.

I know I am going to be OK.

The feelings are unpleasant but not harmful or dangerous.

One step at a time.

The feelings always pass away.

Praise/Review

I can be pleased with the progress I'm making.

I achieved that; I'm getting better.

I coped with that.

If I keep this up I'm going to get really good at this.

I handled that; it should be easier next time.

I did that well.
Top tips for coping with anxiety

1. Remember that the feelings are nothing more than an exaggeration of normal bodily reactions to stress – your threat system has been activated.

2. Remember they are not in the least harmful or dangerous, just unpleasant.

3. Try and stop adding to your anxiety with unhelpful thoughts (consider attending the Challenging Unhelpful Thinking Habits workshop) and notice how the anxiety will start to fade away.

4. If you find yourself worrying a lot try and postpone your worries and you will hopefully find your worries do not seem as important or bad as you originally feared / thought.

5. Focus on what is happening outside of your body rather than your body sensations (Mindfulness of the External World can help with this).

6. Try and let the fear pass, without fighting it or running away from it – just accept it (external mindfulness / mindful breathing can help with this).

7. Muscular relaxation can help you relax when your body feels really tense and uncomfortable and can be particularly effective in helping you get to sleep.

8. A healthy lifestyle is likely to help: good diet, regular exercise, activities that give you both a sense of achievement and pleasure.

9. Remember it is better to learn to cope with anxiety than try and avoid it and situations that make us feel anxious.

10. Make use of the many self-help resources available – visit our website: www.manchester.ac.uk/counselling
1 Remember panic feelings are only normal reactions that are exaggerated – they are not dangerous.

2 They are not harmful and nothing worse will happen. The feelings will soon pass.

3 Notice what is happening in your body now. Stay with the present. Slow down, relax, but keep going.

4 Thinking about what might happen is unhelpful. Only now matters.

5 Accept the feelings. Let them run through you and they will disappear more quickly. Try not to fight the panic. Float over it.

6 Monitor your level of anxiety: 10 (worst) to 0 (least). Watch the level go down.

7 Stay in the situation. If you run away, avoid or escape, it will be more difficult in the future.

8 Take a few slow, deep breaths. Breathe from your stomach – say the word ‘calm’ as you breathe out.

9 Consciously relax your tense muscles. Feel yourself relaxing. Drop your shoulders.

10 Now begin to concentrate again on what you were doing before. Slowly move on when ready.

## Positive Steps to Wellbeing

### Be kind to yourself

Our culture, genes, religion, upbringing, education, gender, sexuality, beliefs, and life experiences make us who we are. We all have bad days. Be kind to yourself. Encourage rather than criticise yourself. Treat yourself the way you would treat a friend in the same situation.

### Exercise regularly

Being active helps lift our mood, reduces stress and anxiety, improves physical health, and gives us more energy. Get outside, preferably in a green space or near water. Find an activity you enjoy doing, and just do it.

### Take up a hobby and/or learn a new skill

Increase your confidence and interest, meet others, or prepare for finding work.

### Have some fun and/or be creative

Having fun or being creative helps us feel better and increases our confidence. Enjoy yourself!

### Help others

Get involved with a community project, charity work, or simply help out someone you know. As well as benefiting others, you'll be doing something worthwhile which will help you feel better about yourself.

### Relax

Make time for yourself. Allow yourself to chill out and relax. Find something that suits you - different things work for different people. Breathe... (imagine a balloon in your belly, inflating and deflating as you breathe in and out)

### Eat healthily

Eat regularly, eat breakfast, eat healthily, eat fruit and vegetables, drink water.

### Balance sleep

Get into a healthy sleep routine - including going to bed and getting up at the same time each day.

### Connect with others

Stay in touch with family and friends - make regular and frequent contact with them.

### Beware drink and drugs

Avoid using alcohol (or non-prescribed drugs) to help you cope - it will only add to your problems.

### See the bigger picture

We all give different meanings to situations and see things from our point of view. Broaden out your perspective and consider the bigger picture ('the helicopter view')

What meaning am I giving this? Is this fact or opinion? How would others see it? Is there another way of looking at this? How important is it, or will it be in a year's time? What can I do right now that will help most?

### Accepting: 'It is as it is'

We tend to fight against distressing thoughts and feelings, but we can learn to just notice them and give up that struggle.

Some situations we just can't change. We can surf those waves rather than try to stop them.

Allow those thoughts and sensations just to be - they will pass.
