

Share Your Experience of Extreme Weather on Campus

We're inviting colleagues to take part in a survey on how extreme weather has affected the buildings you work in.

Your local knowledge and experiences are vital in helping us understand where disruption has occurred, whether from flooding, overheating, storms, or other impacts. The information you share will be used to inform the University's Chief Property Officer and will directly support work to strengthen the resilience of our estate.

This survey is part of a [Sustainable Futures](#) project led by our Resilience Lead, Ben Parkes, working in collaboration with academic experts to address environmental challenges.

By contributing, you'll play an important role in shaping how the University prepares for and adapts to the effects of climate change. Please also share the survey with colleagues who may have relevant experiences to add.

Complete the survey [here](#).
