

Share your experiences of safety during the transition process

Suicide risk during the transition of care from CAMHS into adult services

Do you **work** in **child and adolescent** or **adult mental health services** and care for **patients with suicidal thoughts, feelings or intentions?**

What are we doing?

We are asking participants to complete our online survey looking at the **differences in care and treatment** between child and adolescent and adult mental health services, and how this may **impact suicide risk**

Why are we doing this?

To help us make recommendations to **improve safety** for **all young people** moving from child and adolescent into adult mental health services, and to **reduce suicide in young people** under the care of mental health services

How can you help?

You can take part in the study by scanning the QR code or visiting our [Clinician survey](#).
