INTERDISCIPLINARY RESEARCH

- **Interdisciplinary research is crucial to addressing complex challenges across biology, medicine and health.**
- While projects are often based within a particular School, many involve collaborations across research groups, Schools, Faculties and external organisations.
- Research challenges such as cancer, infection, healthy ageing and digital health often draw on expertise from multiple disciplines.
- Research projects are interdisciplinary by their nature.
- When searching for PhD opportunities, it's your passion and interest in that project that are most important.
